The sequences given in AAQ58814-27 encode antigens of structural and non-structural regions of non A non B hepatitis virus (NANBHV). These sequences were derived from the plasma of a NANBH patient by recombinant DNA techniques. These fragments are useful for the diagnosis of NANBH patients and the detection of NANBH carriers, (Updated on 27-AUG-2003 to correct OS field.)
This invention relates to a novel nucleic acid fragment containing a nucleotide sequence which codes for non-A-non-B type hepatitis virus antigen which has a fully defined sequence of 273 or 330 amino acids as given in the specification. The invention is useful for producing non-A-non-B type hepatitis virus antigen by recombinant techniques. The invention may therefore be useful for diagnosing hepatitis C virus infection in a patient and thus helping in prevention of the disease. The invention allows effective detection of non-A-non-B hepatitis patients. The present sequence is that of a cDNA sequence of the invention which encodes a non-A-non-B type hepatitis virus antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antigen, structural; non-structural; non A non B hepatitis virus; NANBHV; NANBH; patient; plasma; diagnosis; detection; carrier; ss.

The invention is useful for producing non-A-non-B type hepatitis virus antigen by recombinant techniques. The invention may therefore be useful for diagnosing hepatitis C virus infection in a patient and thus helping in prevention of the disease. The invention allows effective detection of non-A-non-B hepatitis patients. The present sequence is that of a cDNA sequence of the invention which encodes a non-A-non-B type hepatitis virus antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel nucleic acid fragment which codes for non-A-non-B type hepatitis virus antigen, useful for diagnosing hepatitis C virus infection in a patient.

BCGAI, Library constructed by Stavros Babilardes and
re-arrayed by A. Cuming & Honglin Rong. Construction of
re-arrayed by A. Cuming & Honglin Rong. Construction of
re-crys syncetor arms. The vector is designed containing
the pBluescript sequence as well as the lambda DNA and
cDNA is cloned in the ECORI and Xho! sites in the
pBluescript sequence. The vector was then packaged using
cols and amplified. The library was excised by mass
cels and amplified. The library was excised by mass
excision using Stratagene's Mass excision kit to infect
SOLR cells with phagemids and ampicillin resistant
transformants selected. Approximately 1,000,000 colonies
were grown and recovered by using Quiagen midi prep kit.2
micro grams of plasmad DNA were used to transform DH10b
cells by electroporation. Clones corresponding to abundant
transcripts were identified by colony hybridization and
eliminated from the library, be rearraying. This library
is non-directionally cloned."

Library constructed by N. Garrett, E. ellefroid, and A.M. Zorn
Library constructed by N. Garrett, E. ellefroid, and A.M. Zorn
(Welloome/CKC Institute). DNA Sequencing by: Washington University
Genome Sequencing Center
Clone distribution: Xenopus clones from this library are available
through the I.M.A.G.E. Consortium/LLNL at: info@image.llnl.gov
Seq primer: -40RP from Gibco
High quality sequence stopp: 524.

                                                                                                The sequences AAT27937-T27989 represent novel sequences isolated from hepatitis C virus subtypes different from subtypes la-c, 2a-d, 3a-f, 4a-j, 5a and 6a. They sep. from the novel subtypes 1d-f, 2e-1, 2k, 2l, 3g, 4k-m, 7a-C or types 9, 10 or 11. The sequences corresp. to the 5. Untranslated region (UR), the Core/El, NS4 or NS5B regions of the genome. This sequence represents nucleotides 478-925 from the HCV type loans isolate NE98. The new HCV types were isolated from patients with chronic HCV from the Benelux countries, France, Cameroon and Vietnam, because of their aberrant reactivities. The RNA was extracted, cDNA synthesised and PCK amplified, cloned and genotyped. The 5'UR, Core/El and NS5B regions were sequenced either directly or partially and used to classify the new viruses into (sub)types based on comparison with known sequences. The sequences ware used to generate the peptides ARP96424-R96524. The sequences can also be used to synthesise probes and primers for the detection of HCV in a sample. The polypeptides can be used to detect anticenty.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note= "cleavage site FspI (not present in sequence, introduced by site directed mutagnesis of sequence 344-349 from CCCGCC to TGCGCA)"
                       Hepatitis C virus poly:nucleic acid unique to unidentified sub:type used to develop probes and primers for new sub:types and vaccines to prevent and treat infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polynucleotide comprising Bifidobacterium genome sequence useful as a probe or primer for detecting and/or identifying Bifidobacterium longum in a biological sample.
                                                                                                                                                   New ribonuclease DNA from Streptomyces aureofaciens - used for disrupting metabolism, functioning and/or development of selected cells, esp. plant
                                                                                                                                                                                                                                                     The mature protein is a guanyl specific ribonuclease. The sarnase has an intracellular toxicity between that of RNase T1 and barnase. It can be selectively expressed in cells of tissue of male or female reproduction organs to produce male sterile or female sterile plants. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 24-OCT-2003 to standardise OS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antidiarrheic; antibacterial; inhibitor of Salmonella; detection; identification; lactic acid bacterium; diarrhoea; pathogenic bacteria; rotavirus; food composition; pharmaceutical composition; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bifidobacterium longum NCC2705 related nucleotide sequence SEQ ID:1104
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bifidobacterium longum NCC2705; Bifidobacterium; bacterial;

The present invention describes a polymucleotide (I) comprising a sequence of a Bifidobacterium genome selected from the mucleotide sequences given in ABOB1842 and ABOB1843, or a sequence exhibiting at least 904 identity or which hybridises with the sequences given in ABOB1843. Also described is a polymucleotide (II) encoding a fuelon protein, comprising a sequence selected from 1097 sequences given in ABD6258 to ABP66354 ligated in frame to a polymucleotide encoding a chetrologous polypeptide. (I) has antidiarrheic and antibacterial activities, and can be used as an inhibitor of Salmonella. (I) (which is a probe) is useful for the detection and/or identification of Bifidobacterium longum in a biological sample. A carrier containing the lactic acid bacterium Bifidobacterium longum NCC2705 (CNCM I-2618) can be used detection and/or identification of for actic acid bacterium and/or treating diarrhoea brought about by pathogenic Compacteria and/or rotevirus. The carrier is a food composition selected from milk, yogurt, curd, chesse, fermented milks, milk based fermented products, ince-creams, fermented cereal based products, milk based formula, pet food or a pharmaceutical composition selected from tablets, liquid bacterial suspensions, dried oral composition selected from tablets, liquid bacterial suspensions, dried oral cappement, wet oral supplement, dry tube feeding or wet tube feeding. (I) is useful in DNA arrays or chips to carry out analysis of the expression of the Bifidobacterium related nucleotide sequences given in the Sequence Listing from the present invention but not mentioned further within the specification. N.B. The sequence date for this patent is not represented in the printed specification on sequence information

Mittman S, Agnew WS;

This invention describes a novel biochip comprising probe spots, each containing many identical probes. The probes are nucleotide sequences of 30-80 bases, are prepared ex situ from synthetic oligonucleotides and at least one includes a segment of at least 20 bases identical with, or

Biochip containing probes complementary with open reading frames in Escherichia coli K12, useful for detecting gene expression and expression
                                                                                                                             The present invention provides the protein and coding sequences for the human brain T calcium channel alpha 1G and alpha 1I subunits. The alpha 1G subunit gene (designated CACNAIG) consists of 38 exons, and alternative processing leads to the production of 64 different proteins. The alpha 1I subunit (designated CACNAII) consists of 37 exons, and 8 proteins are produced due to alternative processing. The sequences provided by the invention are useful for screening drugs for use in the
                                 Splice variants of the human brain T calcium channel alpha 1G and alpha 1I subunits and genes encoding the subunits, useful as targets for antiepileptic drugs or for testing compounds or compositions useful in treating epilepsy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Biochip; gene expression; gut; diagnostic; detection; probe; ss.

complementary to, a segment of an open reading frame (orf) of Escherichia coli K12. The blochip is used for specific detection of gene expression in X12 and for determining the gene expression pattern, e.g. for diagnostic determination of which E. coli strains are present in the gut, and to determine the effects of e.g. growth media on gene expression. The blochip provides as comprehensive as possible detection of the K12 connew, with simultaneous analysis of many different genes with a single device, and comparison of gene expression between K12 and its mutants or other E. coli strains in a single experiment. Apart from qualitative and quantitative information densities for the various strains. The use of synthetic oligonucleotides for preparation of probes allows free synthetic oligonucleotides for preparation of probes allows free reactivity and reproducibility); also synthetic probes are generally shorter than probes prepared by polymerase chain reaction. ACD68731 to ACD681940 reparesent oligonucleotide probes used with the biochip described in the biochip described

Novel DNA array useful for determining differential expression of Methylococcus capsulatus genes, comprises polynucleotides or oligonucleotides representative for a selective number of Methylococcus capsulatus genes.

Claim 14; Page 271; 678pp; English.

```
The invention relates to a novel DNA array giving a representation of a number of Methylococcus capsulatus genes. The method of the invention is useful for determination of the differential expression of the genes of M. capsulatus, and for studying gene expression on a genomic scale and in gene expression assays of M. capsulatus genes. The sequences shown in ABQ90016-ABQ91855 represent M. capsulatus genes for use in arrays of the
                                                                                                                                                                                                                                                                                                                                                                                                     Human; uterine motility-association disorder; uterus; pregnancy; labour;
                                                                                                                                                                                                                                                                                                                                                                                cDNA encoding for human uterine motility-association polypeptide #32.

The present invention relates to the isolation of novel human uterine motility-association polypeptides (AAU18094-AAU18152), and cDNA and genomic sequences encoding for these polypeptides. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with uterine motility such as pregnancy and labour, and menstrual disorders. The polymucleotide sequences of the invention are also useful in gene therapy. AAS28936-AAS28994 represent cDNA sequences encoding for novel human uterine motility-association polypeptides. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid molecules encoding 49 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 4; SEQ ID NO 42; 524pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 22-AUG-2000;
                                                                                                                                                                                                                           02-AUG-2001
ABA06539;
The invention relates to novel nucleic acids and polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to these polypeptides. The polyuclectides are especially useful in the diagnosis, prognosis, prevention and/or treatment of diseases which include kidney disorders (e.g. renal failure or nephritis), cardiovascular disorders (e.g. hypertension or myocardial infarction), electrolyte imbalance disorders (e.g. hyponatraemia or hyperkalaemia), electrolyte imbalance disorders (e.g. hyponatraemia or hyperkalaemia), neoplastic disorders (e.g. nephtoma or renal cell cancer), autoimmune disorders, neural activity and neurological disorders, wound healing and respiratory disorders. AAS30165-AAS30251 represent the novel numen renal and cardiovascular-associated nucleic acid sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at: ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polynucleotides and polypeptides, useful for diagnosing, treating, preventing or prognosing e.g. kidney, cardiovascular, blood, electrolyte imbalance or neoplastic disorders, autoimmune diseases, cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 328 BP; 50 A; 87 C; 99 G; 88 T; 0 U; 4 Other,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length:

```
The present invention provides human cDNAs, proteins and related genomic DNAs. These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders and inflammation. The present sequence is a cDNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Central nervous system; CNS; autoimmune disease; rheumatoid arthritis; hyperproliferative disorder; neoplasm; cardiovascular disorder; cardiac arrest, cerebrovascular disorder; ischaemia; andiogenesis; nervous system disorder; Alzheimer's disease; AIDS; ocular disorder; acquired immunodeficiency virus; dysphagia; gastrointestinal disorder; adenocarcinoma; reproductive system disorder; testicular feminisation; endocrine disorder; diabetes; cancer; leukaemia; neovascularisation; respiratory disorder; renal disorder; kidney failure; blood disorder; myocardial infarction; wound healing; cell proliferation; skin aging; food additive; food preservative; gene therapy; gene; ss.
                                                                                                                                                                                                                                                              Isolated nucleic acid molecule encoding an inflammation-associated polypeptide is used in preventing, treating or ameliorating a medical

   The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded to novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. angiogenesis, nervous system disorders e.g. Alzheimer's disease and angiogenesis, nervous system disorders e.g. Alzheimer's disease and amylotrophic lateral sclerosis, infections caused by bacteria, viruses c.g. cyduired immunodeficiency virus (AIDS) and fungi, ocular disorders e.g. dastrointes immunodeficiency virus (AIDS) and fungi, ocular disorders c.g. dastrointes and irritable bowel syndrome, reproductive system cancers e.g. testicular feminisation, endocrine disorders e.g. disorders e.g. cepitudary dwarfism, cancers and disorders at the cellular level e.g. leukaemia, disorders e.g. nonallergic rhinitis, renal disorders e.g. respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. cutte kidney failure and blood related disorders e.g. myocardial cinfarction. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Endocrine protein, human, mouse, rabbit, goat, horse, food additive, cat, dog, chicken, sheep, immunosuppressive, antiarthritic, vasotropic, antirhematic, antiproliferative, cytostatic, cardiant, neuroprotective, cerebroprotective, nootropic, antibacterial, virucide, fungicide, cancer, ophthalmological, vulnerary; gene therapy; autoimmune disease, neoplasm; hyperproliferative disorder, breast, liver; cardiovascular disorder; se, cerebrovascular disorder; nervous system disorder; bacterial infection; fungal infection; viral infection; ocular disorder; endocrine disorder; wound healing; skin aging; organ transplantation; food preservative; tissue regeneration; anti-infertility.

Sequences AAS29511-AAS29736 represent cDNA molecules, which encode the endocrine polypeptides of the invention. Endocrine polypeptides and their endocrine polypeptides of the invention. Endocrine polypeptides and their endocrine polypeptides and their endocrine polypeptides and their endocrine polypeptides or sheep. A treatment and prevention of various types of disorders in e.g. humans, compared to an endocrine polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, byperproliferative disorders such as neoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular chieckers such as cardiac arrest, cerebrovascular disorders such as cardiac arrest, ortuses and fungi, collar disorders such as corner infections caused by bacteria, viruses and fungi, collar disorders such as corner infection, endocrine disorders such as corner and infectioit, endocrine disorders such as connex such as asthma. The polypeptides can also be used corner and infertility, gastrointestinal disorders such as connex and infertility as a such as glomerulonephritis and corner and insorders such as a such as a such as a such as defined to sunburn, to maintain or aid wound healing, to prevent skin aging due to sunburn, to maintain corgans before transplantation, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Note: The sequence data for this patent did not form part of the printed specification, but was cobbained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ds; gene; immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; antipacterial; virucide; funglicide; optibalmological; gene therapy; channel/transporter protein; rheumatoid arthritis; neoplasm; channel/transporter protein; cerebral sechemia; angiogenesis; nervous system disorder; Alzheimer's disease; ocular disorder; corneal infection; wound healing; epithelial cell proliferation; skin aging; sunburn; transplantation; chemotaxis; food additive.
endocrine cancers and also for testing and detection e.g. diagnosis.

channel/transporter protein or sequences at least 95% identical to a these. The nucleic acids and proteins encoded by them are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic in alleviating symptoms associated with the disorders and in diagnostic immunosassays e.g. radioimmunosassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthitis, hyperproliferative disorders e.g. carbovascular disorders e.g. cerebral ischemia, anglogenesis, nervous system disorders e.g. articoral ischemia, anglogenesis, nervous system disorders e.g. Alzhaimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotraxis. The polypeptides can also be used and into preservative to increase or decrease storage, capabilities. This sequence corresponds to a gene of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        invention.

Novel polypeptide useful for diagnosis, prognosis, prevention, and treatment of immune, hyperproliferative, renal, respiratory, cardiovascular, reproductive, endocrine, gastrointestinal and Disclosure; Page 229; 335pp; English. Rosen CA, Ruben SM, Barash SC, neurological disorders. WPI; 2002-665432/71.

The invention relates to an isolated polypeptide comprising a sequence at least 90% identical to a full length protein sequence selected from 55 sequences given in the specification such as a sequence of 163, 74 or 140 amino acids fully defined in the specification, or the encoding sequence contained in 49 cDNA clones given in specification e.g. HCFATO5, HWAAE95 or HTYBMO1. The protein and its encoding nucleic acid are useful for diagnosing a pathological condition or susceptibility to a pathological condition. The protein, its encoding nucleic acid an isolated antibody that can bind to the protein are useful in treating, preventing, diagnosing and/or prognosing immunodeficiencies, autoimmune disorders, allergic reactions and conditions, inflammatory conditions, graft-versus-

```
renal disorders, cardiovascular disorders, respiratory disorders, demonstrated and electrons cardiovascular disorders, respiratory disorders, and carders, endocrine disorders, reproductive system disorders, infectious diseases, and gastrointestinal disorders. The protein of the invention is useful to stimulate neuronal disorders and or diagnose neuronal damage which occurs in certain neuronal disorders or neuro-degenerative conditions, for stimulating keratinocyte growth, to prevent hair loss, to modulate mammalian or decrease storage capabilities, fat content, lipid, protein, or decrease storage capabilities, fat content, lipid, protein, components. The nucleic acid of the invention can be used in gene therapy. This polynucleotide sequence represents one of the novel nucleic acids of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunosuppressive; antiinflammatory; anti-HIV; antibacterial; vulnerary; antiparkinsonian; antisickling; antianaemic; antiarthritic; cancer; antirhemmatic; hepatotropic; cerebroprotective; antiinflammatory; antiallergic; antidiabetic; antiulier; anticonvulsant; antifungal; antiparasitic; cardiant; immune disorder; cardiovascular disorder; neurological disease; infection; nephrotropic; gene therapy; vaccine;

The invention relates to novel genes (ABV83682-ABV84101) and proteins (ABP66710-ABP67129) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel polypeptide useful for diagnosis, prognosis, prevention, and treatment of immune, hyperproliferative, renal, respiratory, cardiovascular, reproductive, endocrine, gastrointestinal and neurological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; SEQ ID NO 205; 369pp + Sequence Listing; English.

Barash SC;

New nucleic acids and polypeptides, useful for diagnosing, prognosing, preventing and/or treating e.g. kidney, cardiovascular, blood, electrolyte imbalance, neoplastic, respiratory, or neurological diseases disorders.

Claim 1; Page 227; 363pp; English.

The invention relates to isolated nucleic acids encoding novel polypeptides. The nucleic acids are useful for chromosome mapping, for radiation hybrid mapping, for detection of cancer, in gene therapy, for indentifying individuals from minute biological samples, as an alternative to restriction fragment length polymorphism (RELP) analysis, in forensic biology and as hybridisation probes for differential identification of tissues or call types present in a biological sample. Compositions comprising the polymoclectides, polypeptides and antibodies specific for the polypeptides may be used in the diagnosis, prognosis, prevention and profit infections, chronic nephritis, cardiovascular disorders (e.g. and/or treatment of kidney disorders (e.g. glomerulonephritis, urinary tract infections, chronic nephritis), cardiovascular disorders (e.g. arrhythmias, carcinoid heart disease, endocarditis), blood disorders (e.g. thrombosis, anaemia, haemoglobin abnormalities), electrolyte (e.g. thrombosis, anaemia, pharyngitis) and neurological disorders (e.g. Alzheimer's disease, Parkinson's disease, Huntingcon's disease).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Issued_Patents_NA:*

Sequence 213, Application US/09711164
Patent No. 6589738
GENERAL INFORMATION:
APPLICANT: Forsyth, R. Allyn
APPLICANT: Ohlsen, Kari
APPLICANT: Zyskind, Judith
TILLE OF INVENTION: GENES ESSENTIAL FOR MICROBIAL PROLIFERATION AND ANTISENSE THERETC
CURRENT APPLICATION NUMBER: US/09/711,164
CURRENT APPLICATION NUMBER: US 60/164415
PRIOR APPLICATION NUMBER: US 60/164415
PRIOR PLING DATE: 1999-11-9
NUMBER OF SEQ ID NOS: 469
Gegenece 535, Application US/09252991A
Patent No. 6551795
Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR APPLICATION NUMBER: US 60/094,190
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO S:3 3142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1146

Computational Analysis of Full-Length Mouse CDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected CDNAs to prepare full-length CDNA libraries for rapid discovery of new RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (10), 1671-1630 (2000)

Computer-based methods for the mouse full-length CDNA encyclopedia: real-time sequence analysis (RISA) system--384-format connected methods for the mouse full-length CDNA library was prepared and sequenced in Mouse Genome Exploration Research Group in Riken CDNA library was prepared and sequenced in Mouse Genome Encyclopedia real-time sequence Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.

DAP(days affer pollination). Due to a cloning artefact

caused by the kit, in most cases the EcoRI site is NOT

present, as well as the EcoRIadapter used for cloning. To

excise the insert, restriction sites upstraem EcoRI should

be used (e.g. BamHI, Sall, Pstl). NOTE: Also due to the

cloning system used Blue/white selection for recombinats

is not 100% reliable. Average insert size is 900 bp"

[ATGTGGCCTTTTTTTTTTTTT]; double-stranded cDNA was ligated to a Draili adaptor [TGTTGGCCTACTGG], digested and cloned into distinct Draili sites of the pWE185.FL3 vector (5' site CACTGTGTG, 3' site CACCATGTG). XhoI should be used to isolate the CDNA insert. Size selection was performed to exclude fragments <1.5kb. Library constructed by Dr. Sumio Sugano (University of Tokyo Institute of Medical Science). Custom primers for sequencing: 5' and primer CTTCTGCTCTAAAAGGTGCG and 3' end primer CGACCTGCAGCACA."

                                                                                                                                                                                                                          /dlone libe "HO"
/dlone correspond to cDNA); Approximately 5 % of
cDNA); Site_2: XhoI (3'-end of cDNA); Approximately 5 % of
the clones correspond to cDNA from the fungl B. graminis
hordei and tritici, respectively. Due to a cloning
artefact caused by the kit, in most cases the EcoRI site
is NOT present, as well as the ECORIAdapter used for
cloning. To excise the insert, restriction sites upstream
ECORI should be used (e.g. BamHI, Sall; PSTI). NOTE: Also
due to the cloning system used Blue/white selection for
recombinats is not 100% reliable. Average insert size is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           E 1 (Dases 1 to 494)

//note="Crgan: kidney: Vector: pME188-FL3; Site_1: DraIII
(CACTGTGTG); Site_2: DraIII (CACCATGTG); lst strand cDNA
was primed with an oligo(dT) primer
[ATGTGGCCTTTTTTTTTTT]; double-stranded cDNA was
ligated to a DraIII adaptor [TGTTGGCTACTGG], digested
and cloned into distinct DraIII sites of the pME188-FL3
vector (5' site CACTGTGTG), 3' site CACCATGTG). XhoI should
be used to isolate the cDNA insert. Size selection was
performed to exclude fragments <1.5kb. Library
constructed by Dr. Sumio Sugano (University of Tokyo
Institute of Medical Science). Custom primers for
sequencing: 5' end primer CTTCTGATGTGTGTAAAAGCTGCG and 3' end
primer CGACCTGCAGCACA."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AI786578 150-JUL-1999 at NA 1100 Thear EST 02-JUL-1999 uj17f06.yl Sugano mouse kidney mkia Mus musculus cDNA clone IMAGE:1908323 5' similar to WP:R02D1.1 CE12484 ;, mRNA sequence.
